### Description of the Device

The ELLE TENS 2 ("Device") is an efficient method of drug-free pain relief during your labour.

The device works by passing mild electrical impulses through the skin, via electrode pads, into the nerve fibres which lie below. This will feel like a pulsing sensation. The impulses created by the Device help your body produce its own pain killing chemicals, such as 'endorphins' and 'encephalins'.

The level of pain relief obtained varies from person to person. Some find that the Device provides all the pain relief required during the whole of labour, whereas others find that other analgesics are also needed during the later stages of labour. The Device does not have to be used as a stand-alone painkiller and can also be used in combination with other pain relief methods.

Using the Device is safe for you and your baby, you can use the Device after the onset of labour to allow time for your body's pain killing chemicals to rise. You can use the Device in all positions.
